About Us

We are a leading consulting firm in the provision of Utility Organisational Change Management, Institutional Development Services and General Technical Assistance to utility companies across the world. We design and implement tailor-made Institutional Support and Strengthening Programmes (ISSPs) by addressing management and leadership challenges in utilities. Our home office is based in Uganda's capital city, Kampala, with a branch in Nigeria that oversees our operations in Nigeria and other West African countries. We are also registered in Zambia.

2ML is an acronym for 'Management, Management and Leadership', the insufficiency of which is the harbinger of most of the performance and viability challenges that utilities and other organisations grapple with.

Our Vision

To be a leading change management and leadership consultancy firm

Our Mission

To foster strong partnerships in transformation and Performance Improvement of Institutions & Business Entities

Our Values

Empowerment
Teamwork
Service Excellence

Our Story

2ML Consulting Limited was founded in 2012, when its Senior Team Leader, Dr. William T. Muhairwe, left National Water & Sewerage Corporation (NWSC), the leading provider of water and sewerage services in Uganda, and was driven to support other utilities that were performing poorly due to management and leadership issues.

Since its inception, 2ML has shared its knowledge and expertise with utility companies in Ghana, Jordan, Uganda, Ethiopia, Kenya, Tanzania, Nigeria, Zambia, Sierra Leone, South Sudan, Trinidad and Tobago, Pakistan, Bangladesh and India, demonstrating that indeed utilities can succeed if they are managed well and operate under an enabling environment.

Over the years, we have learnt a lot, mastered our craft and improved our delivery to ensure that our clients receive the best client-side consultancy services. We have also since diversified and lent our touch to other non-water utility companies and businesses; and learnt that the right approaches and combinations of results-

orientation and people-focus will always generate business success no matter the sector.

In whatever we do, empowerment, teamwork and service excellence are always at the centre of our strategy. As we look to the future, we intend to exploit the full potential of new technologies to develop even smarter solutions for our clients.

Upon becoming the Managing Director of NWSC in 1998, my team and I orchestrated 'The 100-Days Performance Improvement Programme (PIP)' which ignited the odds-beating turnaround of NWSC. As 2ML Consulting Limited, we have since replicated the same formula with much success across the world – from Africa, to the Caribbean and Asia.

Dr. William T. Muhairwe
Founder/Senior Team Leader

Theme

Transformation and performance improvement through cultural and attitudinal change

Slogan

Do what you can now with what you have now to generate quick wins

Quality Statement

2ML Consulting Limited shall spare no effort to delight her clients with the peerless quality of leadership and management consultancy services, the current awareness of client expectations, and the pursuit of transformative change, while complying with applicable requirements. In our endeavor to deliver positive change and a client-oriented value system, we shall engage every stakeholder's commitment to register success.

Why We are the Best at What We Do

Our Promise

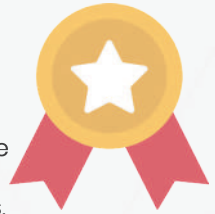

We offer the best in client-side consulting. We approach every client's business as if it were our own. We put ourselves in the client's shoes, align our incentives with their objectives and collaborate to unlock the full potential of their businesses.

In every project we pledge:

- ▶ Highest level of individual involvement/engagement
- ▶ Tailor-made products that are specially developed to address the needs of the client
- ▶ Flexibility and commitment to varying project needs

Our Winning Formula

Our winning formula is based on the Strategy, Structure, People and Processes (SSPP) model. We have learnt that no matter the methodology, successful entities are a result of good strategies, appropriate organisational structures, effective people that create winning teams and optimal processes within a supportive environment to make apt and timely decisions. Partnering with us, therefore, means investing in people and building human capacity, facilitating the development of winning teams, tapping into our decades of experience, using the up-to-date knowledge in organisational capacity building and putting in place frameworks that facilitate the organisation's decision-making process. Using our mantra of doing what you can with what you have to generate quick wins, 2ML Consulting Limited supports utilities to tap the low-hanging fruits through improved operational efficiency.

The 2ML Approach

Promoting Individual Effectiveness

- ▶ Customised & tailor-made training, motivation, mentoring and coaching sessions for individuals

Building Winning Teams

- ▶ Leadership training
- ▶ Development of team building programmes
- ▶ Designing team incentives & disincentives
- ▶ Celebrating diversity
- ▶ Engaging trade unions
- ▶ Defining team roles & targets
- ▶ Celebrating success

Building Organisational Capacity

- ▶ Improvement of service delivery & business profitability
- ▶ Improvement of internal management systems
- ▶ Improvement of internal governance and management
- ▶ Improvement of the external environment
- ▶ Strengthening collaboration and facilitating stakeholder consensus building

Supporting Decision Making

- ▶ Development & improvement of business cases
- ▶ Use of diverse market experience to analyse business structures, systems and procedures
- ▶ Supporting organisation structures, staffing, policies and business process re-engineering

Our Services

To help you achieve success

We offer systems strengthening and tailor-made management & leadership solutions including:

Strategic Business Planning (SBP)

Performance Improvement Programmes (PIP)

Enterprise Resource Planning (ERP) Solutions for Utilities

Research Studies

Human Capital Development and Capacity Building

Geographic Information Systems (GIS) Support

Customer Surveys and Tariff Studies

Integrated Water Resources Management

Utility Losses and Asset Management

What We Offer

Strategic Business Planning

At 2ML, we partner with utilities and business entities to develop Strategic Business Plans using a bottom-up approach. We ensure that all stakeholders including employees, top management, board members and sector players are given a voice in the formulation of the corporate vision and mission statements as well as the core values.

Together, we develop a strategy roadmap that entails strategic objectives that cover perspectives from the organisational capacity through internal processes up to the customer and financial status. The product is a document that takes care of all stakeholder interests with buy-in at all levels. While at it, we employ a structured approach that infuses the strategic planning tenets in the staff such that the knowledge transfer empowers future self-facilitation.

We are aware that whatever the sector, the key stakeholders of any reform and at the centre of any success are the people. That is why we partner with our clients to inspire customer-centric value systems that address behavioral issues for lasting success.

Performance Improvement Programmes (PIP)

We partner with our clients to inspire re-orientation of value systems towards customer centricity and performance, to address behavioral issues and institutionalise a commercial attitude. In partnership with our clients, we develop customised programmes via unprejudiced and elaborate issue diagnosis to ascertain the significant factors explaining variations in Key Performance Indicators (KPIs).

The PIP is then used as a tool for testing the effectiveness of systems employed to leverage and sustain improvements in performance, hence setting the foundation for strategic planning and performance management. It is evident to us that no matter the country, whatever the sector, the key fulcrum of any reform and at the heart of any success are the people. The PIP framework maintains focus on a broad range of corporate planning and performance management challenges, factoring in stakeholder interests and the regulatory environment to accentuate clarity of vision and purpose, in functions discharged to challenge the status quo.

Whatever the intervention required by any of our clients, 2ML Consulting Limited is able to steer the utility or business entity to the desired goal.

Enterprise Resource Planning (ERP) Solutions for Utilities

We provide integrated and intelligent ERP solutions that are revolutionising water utility management and building utilities of the future. Our experience and expertise has over the years enabled us gain insight into the challenges relating to utility losses, billing inefficiencies and other management and financial issues that utilities grapple with. As such, our solutions are highly customisable, tested and proven to mitigate such challenges specific to utilities in developing economies using modern yet affordable and user-friendly technologies.

We streamline Billing, Customer Relationship Management, Asset Management, Accounting, Procurement and Human Resource Management systems among others to empower utilities to reduce operational costs, increase customer satisfaction, improve water quality compliance, reduce utility losses such as Non-Revenue Water and increase billing and payment accuracy.

Do not be left behind, contact us now to join the smart revolution and become a utility of the future.

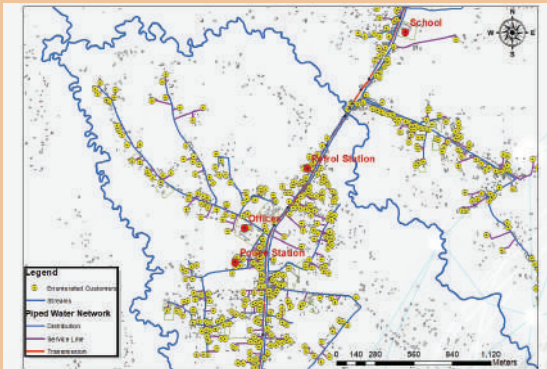

Human Capital Development and Capacity Building

Our capacity building programmes consist of training programmes to update staff repertoire relative to production, distribution, commercial operations, finance and human resource related functions. To adequately equip the staff, we also do direct coaching and mentorship to consolidate knowledge retention and applicability in operations. Strategic training in, inter alia, budgeting, strategic planning and financing models for urban water and waste water investments, under the aegis of development partners such as the African Water Association (AfWA) is also carried out for top management members. We provide a comprehensive range of Human Resource Management Solutions with an alignment to our client needs and assist them to produce measurable business results through their staff.

In most of our projects, we pay special attention to the aspect of Human Resource Management by first seeking to acquire staff buy-in, which enhances staff commitment and motivation. Our Organisational HR support includes developing organisational designs, restructuring/reviewing existing business designs, conducting staff capacity needs assessments, conducting job evaluations, salary surveys and work-load analyses, performance management, organisational change management and development of staff job descriptions, HR manuals and policies.

Customer Survey and Tariff Studies

Utilities face unique challenges in management of customer data. They are expected to balance consumer needs with the ever-growing demands of the organisation. The need to continuously improve service delivery at reasonable and affordable prices for an ever-expanding population base requires that the utility identifies its current and potential customers.

Customer enumeration, therefore, helps in customer data management and utility developmental planning to extend services to meet expanding demands and improve other service delivery areas. Central to utilities knowing their customers is protecting the customer database integrity to guarantee current and future engagement.

Research Studies

In this information-based age, reducing uncertainty to leverage performance as well as addressing consumer expectations as patronage sources constitute the overarching corporate objectives. Complexity and uncertainty in today's fast-paced world are prompting a number of business entities, both profit and non-profit, to seek empirical guidance on a number of critical areas, such as rate structure, that facilitate access, equity and cost recovery.

2ML Consulting Limited has a proven track record of conducting research that guarantees business entity success.

Utility Losses and Asset Management

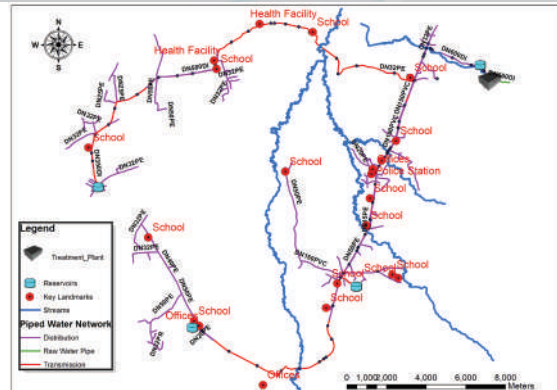

2ML collaborates with utilities to establish strategies such as, unaccounted for losses, financial management, operations and maintenance, among others. The proposed strategies are project-tailored to be feasible in terms of physical application and financial requirements.

This is achieved by promoting ownership among the various utility departments involved in the strategy formulation and implementation, in addition to ensuring consensus by policy makers and top management.

In water utilities, for instance, we understand that NRW reduction is a long-term process and we know how to lay strategies to manage these losses. This often requires investing in metering interventions, pressure and asset management strategies, robust billing systems and leakage management equipment.

Geographic Information Systems (GIS) Support

In emphasising performance improvement of utilities and business entities, customer satisfaction and reliable supply is paramount. GIS support and Network Mapping operation efficiency through quick response to complaints, quick response to leaks and bursts along the network, and quick decision-making during the network planning require accurate data and information. At 2ML, GIS and network mapping is very important as we collaborate with utilities in the turnaround exercise.

With an experienced team with over ten years in Utility Operations, 2ML has and is supporting a number of utilities to map both customers and Pipe Network (Transmission and Distribution) using GIS, including network fixtures, such as air valves, washouts and control valves that are critical for network management. The GIS and network mapping activity usually captures details of customers, such as location, size of connection, category of consumption, date of meter installation, type and size of the meter, as well as details of the Pipe Network, such as size, length, material type, pressure rating of pipes and the fixtures, among others.

Integrated Water Resources Management

Sustainability of water resources is an ongoing concern all over the globe. The adverse effects of environmental degradation, climate change and persistent pressure from the ever-growing population on water resources have collectively contributed to water scarcity.

Significant efforts are underway at various levels to address the critical challenge of water scarcity. Notable are the efforts geared towards achieving SDG 6 on Clean Water and Sanitation, which has several targets including achieving universal and equitable access to safe and affordable drinking water for all, improving water quality, implementing integrated water resources management at all levels, protecting and restoring water-related ecosystems, including mountains, forests, wetlands, rivers, aquifers and lakes, expanding international cooperation and capacity-building support to developing

countries in water and sanitation related activities and programmes, increasing water-use efficiency support and strengthening the participation of local communities in improving water and sanitation management.

At 2ML, we have reported on water scarcity as an impediment towards improved water and sanitation supply services. Sustained water supply is critical to the function of water utilities. We have now mainstreamed integrated water resources management into our Performance Improvement Programmes for water utilities. We are championing this cause amongst our clients by building their capacity on ecosystem management and restoration and climate change. We facilitate our clients to mainstream a catchment-wide approach in their corporate/strategic planning and in cascading this approach down to operations.

Our Partnerships

The Power of Synergy

We thrive on partnerships. Referrals continue to create our opportunities. Every job we take on is an opportunity to forge long-term relationships. We are proud to associate with a growing list of valued partners.
